

Errors may be occurred while running the node.js file

May be one or anyone of the following

- ** port 3000 is already in use for some other application.
- ** Node.js is not installed in the system.
- ** Mongodb is not installed.
- ** All required modules are not installed in the same directory as of app.js
- ** The required modules are listed the documentation and are also under the one of the comments
of app.js file. If any single module is not installed the server will not start.
- ** mongo server is not started. Starting the mongo server is described in installation_nodejs
- ** JRE and C,C++compilers are not present.(If this error is present you will get the reports
but you will not be able to see data since the results are not present).
- ** Python interpreter is not present and it is giving problems.(Chance of this error is high
and it's system's defect and needed to be set inorder for the application to work properly.
If this error is present application will work will, but the python script which is needed
to run the application not works).
