INSTRUCTIONS FOR RUNNING "APP.JS"

---> Create a FOLDER (prefereably 10_24pm).
---> copy the file app.js from the github to the FOLDER.
---> copy the public folder from the github to FOLDER.
---> Install the node modules (while being the FOLDER directory)

    express
    mongoose
    morgan
    cookie-parser
    body-parser
    path
    client-sessions
    fs
    unzip
    mkdirp
    extract-zip
    adm-zip
    python-shell
    express-fileupload
    formidable
    string

```
/****************************

            node modules installing command

            npm install -g module_name
            npm install --save module_name

    example:
            installing "express" node module

            npm install -g express
            npm install --save express
    ****************************/
```

---> Create a folder named "uploaded_files" in the FOLDER

---> In the FOLDER directory

  Start the server by command "node app.js"

If you have followed every step carefully no error will occur :).

Even though if errors are present I have enlisted the probable errors in the errors_may_be_nodejs file.
